

LAYER 1

4

Because of the fact explained in the (3) part, every positions reached in Probability Levels are next layer's starting block. So this process will carry on until the very first layer. The decide of the very first layer's Decider Position will be the best move to play

3

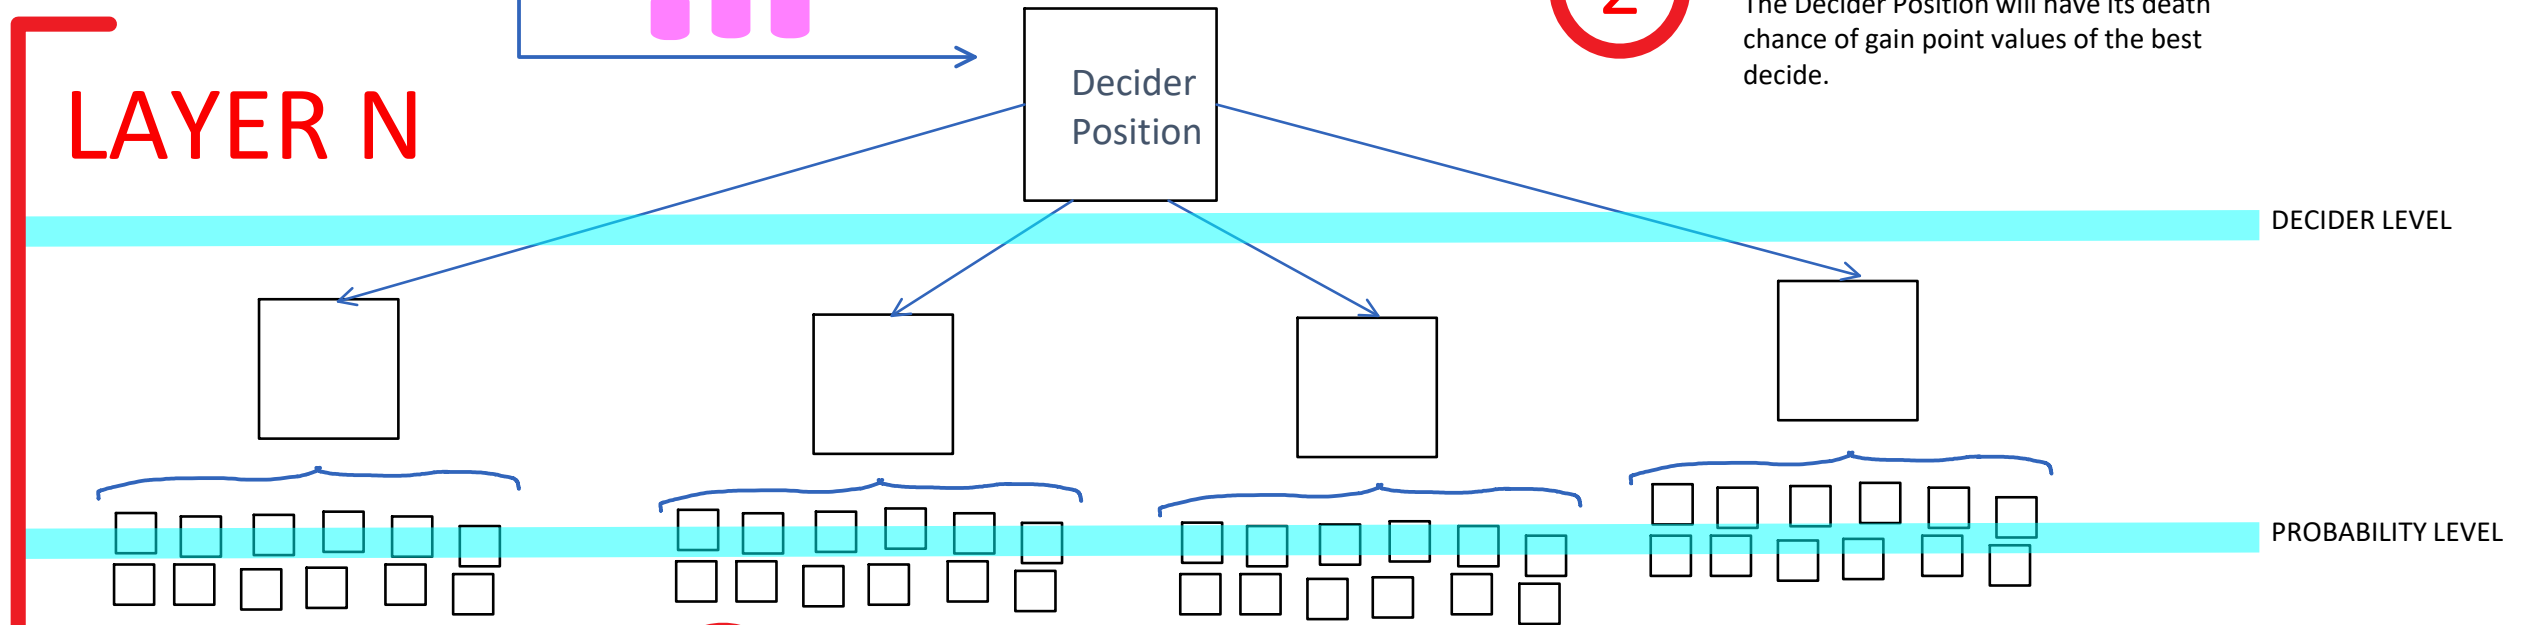

Every one of these sub-branches of this huge tree is just like a new starting position so this situation can go on for how many levels there will be.

2

The 4 options of Decider Level all have a summed up death chance and gain point. The Decider Position will have its death chance of gain point values of the best decide.

LAYER N

1

In this last compute level which is a Probability Level, the death chances and the gain points will be added up for previous Decider Level
